BIOTINA 15-B-11

After much research, our multi-national supplier Hoffmann La-Roche pharmaceutical, recommends the use of 15mg. of high quality Biotin to help improve disorders of the hoof.

BIOTINA 15-B-11 provides 15mg. of such Biotin daily, as well as high levels of D-L Methionine, Vitamin E, Riboflavin and Niacin. This helps accelerate growth and provide good texture to the hoof. Most other hoof supplements contain Biotin derived from Alfalfa meal, which costs much less but is not easily absorbed by horses. The Biotin in BIOTINA 15-B-11 is refined from special sources until very pure making it highly available to the animal. BIOTINA 15-B-11 is packaged as an eleven week treatment and has shown to be successful where other supplements have not.

As with all the products manufactured by Jim Lewis Agri-Nutrition, palatability is excellent and BIOTINA 15-B-11 does not contain any useless fillers! This product carries a permanent registration from the Canadian Food Inspection Agency.
